

SYSTEMS AND METHODS FOR REPOSTING NETWORK
AUCTION ITEMS FOR SALE

ABSTRACT

5 Systems and methods for reselling items won in a network auction are provided. In response to a query to the winning bidder in a network auction, the previously-auctioned item is reposted for resale using existing descriptive data. In other words, the winning bidder does not have to resubmit a description of the item to be resold. Additionally, previously unsuccessful bidders are notified that the previously-auctioned item is reposted for sale. A minimum bid price is set in response to a suggested minimum bid and a seller-specified minimum bid.
